Análise de Sentimentos NLP

Sentiment Analysis NLP

## Summary

### Goal

To analyze reviews from food orders and determine their sentiment on a scale from positive to negative.

### Process

Data from "Amazon Fine Food Review".

Use two distinct methods(Vader and Roberta) to analyze the reviews.

Make a comparison to determine the best one

### Highlights

We have determined that the model using the Roberta method is best at interpreting the context of the texts and therefore make the best analysis of the reviews.
